

NETTOYAGE DU CACHE DU NAVIGATEUR CLIENT

 This operation is done in the user's web browser. It can therefore be done by users themselves.

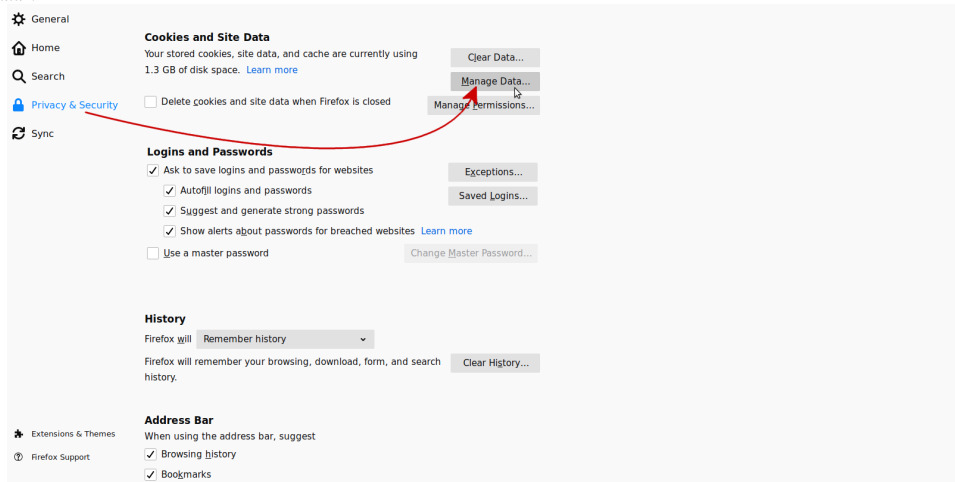

INTRODUCTION

BlueMind client applications such as Calendar and Contacts are saved in the client browser's cache so that they can run in offline mode.

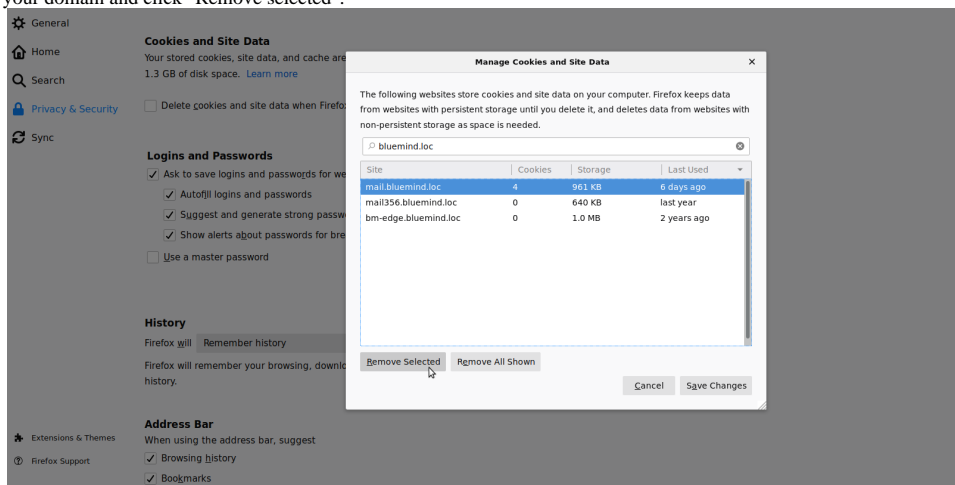

This is done by the *HTML appcache* functionality if it is included in the web browser. The cache refreshes automatically, but it can become corrupted by the browser. As a result it is important to be able to clear the cache to force the browser to upload a recent version of applications.

MOZILLA FIREFOX

- Go to the Firefox preferences page:
 - on Windows: Tools > Options
 - on Linux: Edit > Preferences
 - on Mac OS: Firefox > Preferences
- Go to the section "Privacy & Security" and scroll to "Cookies and Site Data"
