

La console d'administration

The admin console allows the global administrator as well as domain administrators to manage system configuration, servers, domains, scheduled jobs and documentation.

The screenshot displays the BlueMind Administration console. At the top, there is a dark header with the BlueMind logo and the word 'Administration' next to a wrench icon. On the right side of the header, a user profile for 'Admin' is shown with a dropdown arrow. Below the header, a light blue bar indicates 'Central administration' and a dropdown menu shows 'global.virt'. On the left, a sidebar lists the main sections: Directories, System Management, Security, and Backup and Restore. The main content area is divided into four panels: 'Directories' (with a hamburger menu icon) containing 'Create User', 'Create group', and 'Directory Browser'; 'System Management' (with a wrench icon) containing 'Application servers', 'Manage Domains', 'Planning', and 'Manage Messaging system'; 'Security' (with a shield icon) containing 'Modify Certificate' and 'Manage firewall'; and 'Backup and Restore' (with a server icon) containing 'Configuration' and 'DataProtect navigator'. A decorative graphic of overlapping hexagons with various icons is visible in the bottom right corner.
