

CONFIGURATION

The configuration of a BlueMind server includes platform-specific operations, which apply to all the domains of a BlueMind server, and to domain-specific operations.

In this documentation, we use the following terms:

- global administrator (or superuser) for platform-related operations; whose username is *admin0@global.virt*.
- domain administrator for domain-specific operations.

Global administrators are able to perform all domain administrator operations.

The following sections describe how to configure a BlueMind server.

- Admin Console
- Managing Servers
- Managing Domains
- Scheduled Jobs
- System Configuration
- Automatic Memory Adjustment
- Archiving
- Security
- Linked Attachments
- Corporate Signatures
